PRESS RELEASE – Nuenen (NL) – December 2011

Capi2 Nederland BV has entered into partnership with Victron Energy BV as part of the integration of Victron products into its Capi2 power distribution system.

Capi2 Intelligent Bus System

Capi2 Nederland BV manufactures the Capi2 bus system for yachts to replace traditional cable looms. Capi2 enables equipment and electrical systems to be installed on board vessels to provide greater comfort, convenience and safety.

The Capi2 bus system (12V/24 V/220 V) is based on intelligent bus technology. One or more cable looms are installed inside the vessel. Several power node modules are mounted on the cable looms. These power nodes supply the correct current levels to lighting, instrumentation and pump systems. Each node is equipped with a chip that communicates with the Capi2 control panel or touch screen display to inform users of the exact status of all on-board current loads.

Today, Victron Energy equipment is compatible for use with Capi2 bus systems. This will allow users to operate and monitor Victron *Precision Battery Monitors*, *Quattro's*, *Inverters* and *Inverter/Chargers* using their Capi2 systems.

Uninterrupted Current from Victron Energy

Power specialist Victron is constantly devising new solutions for power supplies in extraordinary locations. The company is a leading supplier of self-sufficient *off-grid* systems for the maritime, industrial, automotive, off-grid and rehabilitation markets. Its product range includes sinusoidal inverters, charger/inverters, battery chargers, DC/DC converters, switch panels, and intelligent *Battery Monitor*, *Global Remote* and *BlueSolar Panel* products. Victron Energy has earned itself an enviable and unrivalled reputation in the field of technical innovation, reliability and durability. Its products are regarded worldwide as being the No. 1 professional choice for self-sufficient electrical power generation.

Profile: Capi2 Nederland BV

Capi2 Nederland BV manufactures a wide range of products for yacht builders including power modules, switch panels and touch screen displays. The Dutch bus system was developed for both DIY and professional yacht builders and is suitable for installation on board motor launches and sailing yachts up to 80 ft. Development and production of the Capi2 bus system is carried out exclusively in-house.
